

A reliable and low cost bracelet for documentation and retrieval of medical data.

More than once in one's lifetime, one person will come across someone in need of immediate help.

It could be a child that got lost, or an elder in need. It could be someone having a crisis or even a stroke. While the scenarios are numerous, they all require immediate response.

Tap2sos is a rather simplistic wearable device - operating via the new IoT Cloud platform and COTIC modules technology – developed specifically for emergencies, providing access to medical data (EMR) on the spot.

FAQ---Frequently Asked Questions

- What is tap2sos in simple terms?
It is a simple technological solution that helps to direct information and use health information of a user. It provides easy access to information on basic data such as name, surname, age, blood type, a specific disease by monitoring the user's medical file. With a simple smartphone the necessary information is accessible via NFC (Near Field Communication) system which is pre-installed in most smartphones.
- What a material is the wristband made of? Is it dermatologically tested?
It is a rubber wristband that has all the hygiene and security certifications of the EU.
- Is there any dangerous radiation? Is it safe?
It does not emit any kind of radiation. This makes it accessible for use from all special groups of people: children, pregnant women, users with pacemakers and other relevant groups of people.
- Is tap2sos a patented invention? Who hold its copyrights?
Yes. Blockchain2050 has the rights to its patent no 16739200 registered in the US.
- Is it compliant with GDPR (General Data Protection Regulation)?
Yes. It is designed according to EU protocols, powered by blockchain technology.
- What is the duration of its use? Does it have some kind of battery?
Unlimited. It has no batteries and it has no expiration time. It has no need for power supply.
- With what types of mobile phones does it work?
With any smartphone, tablet or desktop that has the option: **NFC reading**.
- It is easy for use? Is there a need for special training?
It is very simple to use and it requires no user training.
- Who manages the information contained in the application?

The information provided by the system is classified. Only basic information is accessible without a password and just for an emergency use. All other information is safe with a code known to the user and the related doctor or hospital/clinic.

- How fast can it be installed to someone?
In a few minutes. Simply by entering the relevant details of the user by the pharmacist or the doctor or hospital.
- Which health units collaborate with this solution?
Any hospital or nursing (or healthcare companies or insurance companies) unit can agree to be integrated into the tap2sos system by signing a simple information management protocol. It requires no special investment from hospitals/clinics and that is because the system has an open architecture.
- Does the registered information in the system need any regular renewal?
It depends on the choice of the user. If it is connected to the user's medical profile then it is renewed automatically by each visit to the doctor or the hospital.
- Can be used by people with disabilities?
Yes. Tap2sos is an essential support tool for all vulnerable groups.
- What is its cost?
Its low cost , depending on the category of user and possible special features.
- How one can obtain it?
